patrickisgreat@gmail.com | 404.514.7647 | Atlanta, GA

PROFILE

13 years shipping production software, two of them in aviation at Airbus / Skywise. I build the systems that let AI agents do real engineering work — agentic CI/CD, MCP servers and LLM tooling across Vue / TypeScript front ends and cloud-native backends — and I know when a problem is better off without a model.

SKILLS

AI & AGENTIC

Claude • OpenAI • Gemini
MCP servers • Agent orchestration
RAG • Embeddings • Vector search
Prompt engineering • Prompt caching
LLM code review in CI • Claude Code

LANGUAGES

TypeScript • JavaScript • Python
Rust • Go • PHP • Swift • SQL

FRONTEND

Vue.js • Nuxt • React • Next.js
SPA • Micro-frontends
HTML • SASS • CSS • Tailwind

BACKEND & DATA

Node.js • Go • FastAPI • NestJS
Federated GraphQL • REST • Kafka
Postgres • DynamoDB • BigQuery

DEVOPS & TESTING

GitHub Actions • Docker • Linux
AWS (Lambda, Kinesis, SQS) • GCP
CloudFormation • Terraform
Playwright • Vitest • Jest • Pytest • k6

EDUCATION

WALLACE STATE COLLEGE

Computer Science
2000 - 2002 | Hartselle, AL

CONTINUOUS

Coursera • MIT OCW • MDN • Udemy

EXPERIENCE

THREADITATE | Founder & Principal Engineer

November 2025 to present | Atlanta, GA

- Shipped the platform: a Next.js 15 / React 19 / TypeScript (strict) app driving a Rust-to-WebAssembly solver off-thread in a Web Worker, on Supabase, Vercel and a Shopify storefront.
- Architected an AI-augmented GitHub Actions pipeline — lint, type, unit and Playwright E2E gates plus nightly E2E — with an LLM reviewer on every PR, trigger-scoped and model-pinned to hold review spend down without losing coverage.
- Published **agentic-toolkit**: an Actions layer turning any repo into an issue → agent → PR → review → merge → retro loop, behind a single provider seam that runs the same workflows on Claude Code, OpenAI Codex or Google Gemini, routing by complexity between deterministic checks, a human plan-approval gate and agent implementation.
- Built an approve-first bookkeeping agent (Gmail → Claude extraction → human approval → QuickBooks) with an append-only audit log and per-action undo, and a Nuxt 4 / Vue 3 SPA on Supabase.

SOUNDCLOUD | Sr. Software Engineer

October 2023 – November 2025 | Remote

- Creator Success / Artist Analytics: shipped the first iteration of a new user settings service in Go and DynamoDB, and architected a regional minor-protections system.
- Provisioned AWS and GCP infrastructure with Terraform and built automated end-to-end tests into GitHub Actions pipelines.
- Migrated legacy Scala and JVM services onto AWS (DynamoDB, S3), and extended a federated GraphQL subgraph ecosystem in TypeScript and Go.
- Built Kafka event pipelines driving track-boosting algorithms, and ETL pipelines ingesting large datasets into BigQuery.

AIRBUS / SKYWISE | Sr. Software Engineer

September 2021 – October 2023 | Atlanta, GA

- Senior engineer: architected the Network Operations Optimization (NOO) data pipelines — real-time airline logistics on Python, FastAPI, Serverless, AWS Lambda, DynamoDB, Kinesis and SQS — and helped drive PI planning for 10-week SAFe iterations.
- Helped instate e2e, integration and unit testing across Skywise Predictive Maintenance, including a GraphQL mocking system that made pipeline runs deterministic.
- Proposed and helped build the Atlanta Experience Center: a customized A320 in Microsoft Flight Simulator with a 3D cockpit, wired into Skywise for executive demos.

CNN / WARNERMEDIA | Sr. Software Engineer

March 2020 – September 2021 | Atlanta, GA

- Improved performance and scalability of LiveStory, a high-traffic React / GraphQL app serving millions daily.
- Profiled and refactored the cnn-data-api GraphQL service with k6 and Apollo Studio; built a failover REST API that absorbed 2020 election traffic.

Earlier: Digital Additive, Sr. Software Engineer (2015–2020) — Vacoda, a Laravel + Vue.js platform in production at Home Depot and Carters.com. BlacQube (2013–2015) — Mercedes / Mercedes-AMG front ends.
